

Data Security on Mobile Systems (Notebooks)

Users of mobile systems do not always think about the security of their data. Even if the necessary security packages are installed on the mobile system by the company, there is no guarantee that that software will be used. To increase this the protection of company data, O&O SafeErase V2.0 is the right tool for mobile systems.

The Problem

Different from PCs and servers, mobile systems are not continually protected by professional firewalls. It can also be said that most users of these mobile systems generally do not abide by the company's data security guidelines, leading to a lack of adequate data security. Monitoring these systems can be arduous, if not impossible, often leading to heightened user frustration and the deliberate non-use of such monitoring software. Password-based technology is also problematic because passwords are often forgotten.

The Solution

The use of an automated solution to securely delete data on mobile systems can ensure that, in the event of theft or loss of a device, specific data will remain inaccessible to unauthorized users trying to reconstruct sensitive data with data recovery software.

The easy integrating the Windows Task Planer and O&O SafeErase V2.0 enables the secure background deletion of specific portions of the hard disk without any user interference. The Windows Task Planner can, for example, be instructed to launch O&O SafeErase V2.0 whenever a user logs out or shuts down the computer and automatically clear any free disk space (deleted data in Windows are securely deleted one more time) and/or delete specific folders or file types.

The Product

O&O SafeErase does not simply delete your files; it annihilates them using the approved and recommended methods. These methods include the Gutmann method, and those recommended by the BSI and NSA. With O&O SafeErase even hackers and data spies cannot restore your safely erased e-mails, internet histories, file caches, financial data, company information, and private files. And with the new O&O TotalErase feature now available in version 2.0, it is possible to delete your entire computer system with the touch of a button. If Windows NT, Windows 2000, or Windows XP is your operating system, you can now prevent unauthorized restoration of your deleted data and files.

Purchasing Options

O&O SafeErase V2.0 is available in single and volume license variations. Updates from older versions or competing products are also available. By purchasing an O&O Maintenance Agreement for O&O SafeErase V2.0 and remaining up-to-date with the newest versions of the O&O SafeErase software, users can make the unpredictable nature of software upgrades and support a thing of the past.
